

# Cation Exchange Case Study

## Skelmorlie Golf Course

“The FSF Cation Exchange Soil Survey has proved to be one of the main differences you can make to ensure a course that is fit for purpose and more. We have been treating golf greens for many years and they have all benefited greatly from it. We have many testimonials from clients enthusing about how surprised they were that such a simple process could make such a huge difference”

“I have been using FSF products on our greens for the past six years and have been delighted with the results, Following a product programme after soil testing the greens with the FSF Cation Exchange Soil Survey ,combined with a lot of aeration, we’ve been having great results, less moss, a thicker sward, healthier greens. I’m very happy using a mix of FSF liquid and granular products.

**Sidney Mercer , Course Manager, Skelmorlie Golf Club**

“Your soil is your most precious resource”

We can help you achieve the best balance to get the best results from your soil, using our Cation Exchange Rebalancing Soil Survey and our expert knowledge.
