

Case Study - Kilsyth Lennox Golf Course

Cation Exchange Rebalancing Results

Treatment date – 11th March 2013

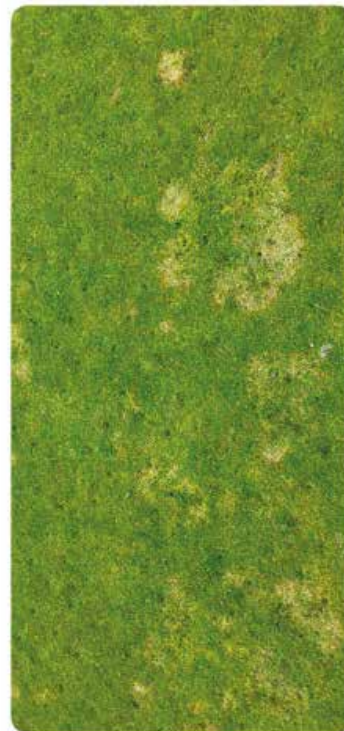

Kilsyth Lennox Golf Course invited us to look at their greens to see if our Cation Exchange Rebalancing Programme would work.

The benefits were beginning to show within **2 weeks** of application, (the after picture was taken 4 weeks after application).

David Stanners the course manager was impressed with the FSF program stating there was vastly less moss on greens, a big improvement of greens over the season and he'd never seen the greens look so good in the month of April, the course normally doesn't start to look good until May, due to the height of the course.

Due to a technical issue, one of the greens didn't get treatment, which gave us an ideal opportunity to compare a treated and non treated green to show how well the FSF program works.
